

Job Description

Role

NetGaming is an upcoming casino content provider. We offer beautifully crafted games across all channels. We are expanding in key regulated markets and adding new product variants to our portfolio. The team consists of industry veterans who have gathered extensive experience at companies such as Entain, NetEnt, Yggdrasil and Pragmatic Play.

We are looking for a passionate, talented, and driven QA engineer to join us in delivering high quality content. You will be tasked with all aspects of game and customer integration testing from inception to delivery.

Responsibilities

- Taking part in QA processes, reading and analysing requirements.
- Creating and executing test plans and test scenarios for functional and non-functional testing of casino games' back-end. Execute all levels of testing (System, Integration, and Regression)
- Testing client-server integrations and analysing logs.
- Describing and reporting defects.
- Ensuring the overall quality of the product.
- Collaboration with the rest of the team members.

Key skills to include

- At least 2 years of professional experience in QA and understanding of development cycle.
- Good knowledge of software testing methodologies, procedures and tools.
- Passion for software technologies and quality.
- Logical and analytical thinking.
- Initiative and enthusiastic person with critical and pro-active thinking.
